

Network Topology Diagram — TD1 Baseline

Network Hardening · ESILV 4th year · Group G1 · 2026-03-04

Notes:

- ① gw-fw: IPs .4 instead of .1 — Azure reserves .0–.3 per subnet (PrivateIpAddressInReservedRange).
- ② sensor-ids absent: Azure for Students capped at 6 vCPUs total; Suricata on gw-fw compensates (UTM).
- ③ LAN↔DMZ traffic bypasses gw-fw without an Azure UDR — firewall not yet in data path [Risk R03, TD2].
- ④ Live SSH brute-force observed during capture: 146.190.237.210, 104.248.85.160, 64.227.160.12 [Risk R01].
